Professional Summary

Senior Python Developer with 5+ years of experience building scalable, high-performance systems using Django, Flask, and FastAPI. Strong background in AWS, microservices, and cloud-native architectures supporting applications with 1M+ users. Experienced in integrating modern AI solutions including LLMs, RAG pipelines, and agentic workflows to drive intelligent automation, faster responses, and data-driven decision-making. Proven track record across fintech, media, and event platforms, with a focus on clean architecture, SOLID principles, and mentoring high-performing team

EXPERIENCE

Software Engineer	May 2023 - Present
Fairfest Media Limited	Mumbai, MH
- Led development of a multi-tenant Event Management Platform using Django Tenants and a Node.js registration portal, enabling seamless onboarding for vendors and attendees. - Architected and deployed a scalable News Application with Django REST Framework, RDS, Celery, Redis, and Elasticsearch for faster content delivery. - Built a Flask-based Slack Bot to automate publishing workflows, reducing manual effort and cutting turnaround time by 80%. - Optimized DailyBrief (1M+ users) with automation that improved publishing efficiency by 80% and significantly reduced operational costs. - Implemented Agentic AI and RAG-based systems leveraging LLMs and vector search to enable intelligent content retrieval, trend analysis, and faster system responses.	
Python Developer	Mar 2022 - April 2023
Dev Technosys Private Limited	Jaipur, RJ
- Designed architecture and database schema for a fintech project, integrating Dwolla, Stripe, and Plaid to streamline payment processing and reliability. - Directed end-to-end development of a multi-platform solution (web, mobile, vendor platform, admin portal). - Deployed infrastructure using Docker on AWS ECS, improving scalability, reliability, and deployment efficiency. - Delivered projects on time, achieving strong client satisfaction for US-based financial partners.	
Python Developer	July 2021 - Feb 2022
Ocode Technologies	Mohali, PB
- Collaborated with cross-functional teams to translate requirements into scalable Python-based solutions. - Optimized backend performance with GraphQL, improving response times and data handling. - Contributed to multiple client projects in a service-based setup, ensuring timely delivery and high-quality outcomes.	

EDUCATION

Master of Computer Application (MCA) , Chandigarh University	2019 - 2021
Bachelor of Computer Application (BCA) , Rajasthan University	2016 - 2019

TECHNICAL SKILLS

- **Languages & Frameworks:** Python, Django, Flask, FastAPI, Node.js, React.js, HTML5, Pandas, Numpy, Pydantic, LangChain, LLMs
- **AI / LLM & Agentic Systems:** LLMs (OpenAI, Claude, Gemini), LangChain, LangGraph, LlamaIndex, Agentic AI, Tool Calling, Prompt Engineering, Function Calling, RAG Pipelines
- **Vector Search & RAG Stores:** FAISS, OpenSearch (Vector Search), Elasticsearch, Embeddings, Semantic Search, Chunking Strategies
- **Architecture & Design:** OOP, Data Structures, Design Patterns, SOLID, Concurrency, Multithreading, Multiprocessing
- **Cloud & DevOps:** AWS (Lambda, S3, EC2, SQS, RDS, ECS, OpenSearch, CloudFront), Docker, Kubernetes
- **Databases & Messaging:** PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, Celery, RabbitMQ
- **Tools & Testing:** Git, Linux, PyTest, Unittest
- **Professional Skills:** Team Leadership, Agile Scrum, Client Communication, Code Review

KEY PROJECTS

- **Intelligent Support Assistant (RAG + Agents)** – Implemented agent-based RAG pipeline enabling contextual Q&A over large document sets; improved answer relevance and reduced human intervention by **50%**.
- **DailyBrief (News App, 1M+ users)** – Built scalable APIs in Django; implemented automation reducing publishing time by **80%**, improving content workflows and engagement.
- **Cashuu (Fintech App)** – Developed lending platform integrating **Plaid, Stripe, Dwolla**; enabled seamless EMI-based repayments and automated bank verification.
- **Slack Automation** – Created Flask-based Slack bot to auto-publish trending news, reducing manual work and boosting traffic.
- **News Categorization (FAISS + LLMs)** – Built pipeline to process **5K+ articles/day** with vector search & clustering, improving push notification accuracy and content relevance.
- **Event Management System** – Designed multi-tenant event app with **Django, React.js, PostgreSQL, Redis, Celery**; enabled vendor uploads, seat management, and attendee networking.

LEADERSHIP & ACHIEVEMENTS

- Led a team of **6 Python developers**, managing sprints, code reviews, and mentoring juniors.
- Competitive coding: **80+ HackerRank** submissions (Python & DB) and **60+ LeetCode problems**, showcasing problem-solving skills.
